

BestStand SA500

Sit to Stand Lift

The BestStand SA500 is a great choice for sit to stand transfers with patients who can bear weight but lack the strength to stand on their own. This powered lift offers a number of user friendly features for increased patient safety and comfortability, as well as caregiver ease of use. It has a narrow base, allowing for optimum maneuverability in tight spaces. The knee pads can be adjusted and the foot plate can be removed if desired, granting full customization based on the patient needs. The legs of the lift can be manually opened and closed to aid in navigating around obstacles such as toilets and wheelchairs. The wide lifting range of the SA500 allows for safely and effective use with a variety of patient heights and sizes. It is compatible with all MedCo Technology loop style Sit to Stand Slings.
